

ATS Selenium Test Summary

Generated: 2026-02-10 — Environment: macOS (local run)

Overview

Scope: Full Selenium end-to-end suite for the Attendance app (all tests under `selenium/src/test/java/com/attendance`).

Command	mvn test (module: selenium)
Result	Tests run: 19 — Failures: 0 — Errors: 0 — Skipped: 0 — BUILD SUCCESS
Duration	~2m 47s (reported by Maven)

Notable Warnings

- Selenium CDP warnings observed: "Unable to find CDP implementation matching 144" — informational only; consider adding a matching `selenium-devtools-vnn` dependency to silence.
- SLF4J: No provider found — tests default to NOP logger (informational).

Changes / Traceability

For QA and audit purposes, the run included recent updates to the client and tests:

- `client/src/App.tsx` — canonicalized empty-submit message to "please enter or select a name from the list."
- `selenium/src/test/java/com/attendance/TestBase.java` — new shared WebDriver factory supporting chrome, edge, and safari via `-Dbrowser=...`
- All test classes updated to extend `TestBase` for centralized setup/teardown.

How to Reproduce / Run

Default (Chrome):

mvn test

Edge:

mvn test -Dbrowser=edge

Safari (macOS):

mvn test -Dbrowser=safari

PDF Generation

The HTML summary is saved at:

selenium/target/reports/ATS-Test-Summary.html

To convert to PDF locally using Google Chrome (macOS), run:

/Applications/Google\ Chrome.app/Contents/MacOS/Google\ Chrome --headless --disable-gpu --print-to-pdf="selenium/target/reports/ATS-Test-

After running that command the PDF will be at:

selenium/target/reports/ATS-Test-Summary.pdf

Report generated from the local test run. If you want, I can run the Chrome headless command now to produce the PDF here.
